

## How to Operate in Winter Weather Conditions

1. At the end of each day, completely purge the graywater tank.
2. Using 2 or 3 gallons of \*RV antifreeze, pour this in the drain and leave in overnight.
3. Before the next use, using a *designated*- empty 5-gallon bucket with lid, drain the \*RV antifreeze into the bucket for reuse each night.
4. Once the lines are drained of \*RV antifreeze, your unit is now ready for use.

\*Be sure and use RV antifreeze ONLY. RV antifreeze is different from automotive antifreeze in that it is not toxic to humans and safe to use in freshwater systems and plumbing lines.

Provided below are links to good quality RV antifreezes:
